Editorial

Jono La Nauze,
Chief Executive Officer

An election is in the air – you can almost smell the democracy sausages. But there's an unsavoury note this time around. Frustration is building with a political system that's not solving our problems fast enough. People want real change.

But what's on offer could come with hidden side effects.

In recent years, Gina Rinehart and other fossil fuel billionaires have helped One Nation lay a bonfire of grievances and lies, and it's threatening to burn Victoria's climate progress to ashes.

Over the past twelve years Victoria's Labor government may have delivered their share of disappointments, but they have also led the nation – and at times the world – on climate policy.

At times, the Liberals have joined them on this journey. Indeed, last election they came out with bold policies to support household batteries – policies it took federal Labor years to catch up to.

Sadly, this time they've followed Pauline Hanson's lead, promising to block clean energy and hook Victoria on obsolete gas technology.

If there was ever an election to get involved, this is it. This November it's our job to make sure voters see through the lies and use their vote to safeguard our collective future.

If you do one thing for our planet this year, get involved in the election campaign. Whether it's with Environment Victoria or your local grassroots group, across our collaboration of over 112 incredible organisations I guarantee there's a place for you.

Find out how you can contribute in the pages ahead. You'll read inspiring stories of everyday people from all walks of life standing together for a better future. From defending ancient wetlands to helping renters access clean affordable energy, there's a role for you.

Thank you for being a part of our movement.

Victoria's clean energy future is on the ballot

Victor Komarovsky

Community Organising
Co-Manager

With cost-of-living front of mind for voters, the choice for this election is clear: cheaper, cleaner renewable energy, or higher bills and more pollution.

Right now, our hard-won progress on climate and clean energy is on the line.

If elected in November, Jess Wilson's Liberal-National Coalition has pledged to:

1. Wind back the residential gas phase-out, driving up costs to build and maintain homes.
2. Pause critical renewable energy projects like offshore wind and abandon key transmission lines.
3. Effectively ban onshore wind energy through prohibitive exclusion rules.

Meanwhile, One Nation has promised to use public money to keep ageing coal-fired power stations operating well past their use-by date.

During an election where cost of living is voters' number one concern, the Liberal-National Coalition and One Nation seek to drive up energy bills by cutting the cheapest form of energy – wind and solar.

Thanks to years of campaigning, Victoria is now living proof that clean energy cuts both household costs AND climate pollution. That gives us a powerful case to take to voters that slowing the energy transition – as the Coalition and One Nation are proposing – will drive Victorians' bills higher and leave us stuck with polluting energy.

The polls point to a number of possible scenarios. We could have a minority government, but which parties and independents might hold the balance of power – and what policies they've promised – is uncertain. This means the work we all do between now and the election is vital!

So, here's the plan:

This year we've made the case that the benefits of clean, renewable energy must extend to everyone, including renters, apartment residents, and people on low incomes. This work is gaining traction. The parliamentary inquiry into affordable renewable energy for apartments echoed many of our recommendations. We'll keep pushing for these recommendations to become law and show Victorians how clean energy can improve everyday life.

We also created the 'Victorian Election Climate Collaboration' with allies and grassroots groups across the state.

Our shared approach to campaigning – with a policy platform, shared corflutes, and co-design of actions and events –

will maximise our reach and impact.

Across key electorates including Box Hill, Ashwood, Werribee, Point Cook, and Ben Carroll's seat of Niddrie – and through the work of the Western Community Alliance and dedicated Action Network volunteers – we'll be talking with voters about clean energy as a practical cost-of-living solution.

We're putting a clean, affordable vision for Victoria's energy future front and centre. When Victorians see a yard sign on their neighbour's fence, meet a volunteer on the street, open a newspaper or drive past a billboard, they'll be faced with a choice this election. Because Victoria is at a fork in the road, with two very different paths ahead.

GET INVOLVED

There's never been a better time to join our Action Network of volunteers than now. This is your chance to get involved in the campaign to protect the clean energy progress that belongs to all of us. To find out how you can get involved head to [ENVICT.ORG/ELECTION](https://envict.org/election)

Environment Victoria supporters gathering outside Ben Carroll's office, to welcome him as Victoria's new Premier and back in calls for clean energy.

Coming together at the Victorian Election Climate Convergence. Julian Meehan

Converging to put climate on the agenda

Hayley Sestokas

Community Organising Co-Manager

The Victorian Election Climate Convergence saw leaders from across our movement come together.

"We are stronger when we come together" was the resounding message participants took away from the Victorian Election Climate Convergence, where leaders and volunteers from more than 112 organisations and climate groups across Victoria gathered to connect, share and plan.

"Wonderful people – presenters, volunteers, participants. The focus on building networks and positive engagement strategies." – Kate

The event was a launch pad for the 2026 state election campaign – a place where we could take stock and survey the lay of the land. We reflected on what we have achieved together over the last decade, including wins for more clean energy in our homes, Treaty for Victoria, and the phase out of coal. All this progress is

now facing the threat of rollbacks in the face of a possible Liberal-National or One Nation government.

This potential regressive future was brought into sharp focus through our program of speakers, who emphasised the very real threats to our clean energy future. We heard about the kinds of collaborative, strategic and tenacious leadership that's needed to move a groundswell of people – all campaigning for our vision of a clean energy future for Victoria – in the lead up to the November election.

Our Action Network of Local Organisers and volunteers played leading roles in supporting this dynamic day of workshops, stalls and plenary sessions. The Convergence created a rare space for volunteers, campaigners, community leaders and organisations to come together, share ideas and strengthen the relationships that underpin effective campaigning for the months ahead.

Together we shared learnings about movement storytelling, digital content creation, practical organising and best practices for responding to misinformation.

People of different ages, cultures and language backgrounds came together, with newer volunteers learning alongside

experienced organisers. Everyone left feeling energised, with deeper connections and practical support, ready to create lasting change in their communities.

"Witnessing everyone's passion for climate change and willingness to collaborate to campaign for change in the upcoming election." – Deborah

People power is at its strongest when we stand together, and the Convergence solidified deep collaboration across our movement. It helped groups see themselves as part of a shared effort for climate, nature and communities, growing camaraderie and commitment to the work ahead.

Since the event, we've continued building the foundations for shared election work, with new groups joining the ongoing collaboration and volunteers preparing to have conversations with voters as they consider their options this November.

More than a one-day event, the Convergence helped build trust, hope and momentum behind the people power needed for the campaign this year and beyond.

"Cultural inclusion, listening, finding common ground. It has re-boosted my belief that we can do it." – Greg

A Movement of Many

Hayley Sestokas

Community Organising Co-Manager

Across Victoria, people from many cultures, communities and walks of life are taking action for climate and nature.

But for a long time, Australia's environment movement has fallen short of reflecting the full diversity of the people in it.

'Movement of Many' is our attempt to help change that: by celebrating leaders from a wide range of cultural backgrounds, creating space for new voices, and shining a light on the everyday Victorians bringing strength, wisdom, joy and creativity to our biggest environmental challenges.

Since the release of our first report, new initiatives have emerged, leaders have stepped into new roles, and new connections have grown into lasting collaborations.

On 30th of July we held an event to celebrate the launch of our second report. It was an inspiring evening where we had the chance to hear from community leaders about their journeys, their relationship with Australia what led them to their activism. You can see the report at [ENVICT.ORG/MOVEMENT-OF-MANY-2](https://envict.org/movement-of-many-2)

In loving memory of Elaine Smith

Victor Komarovsky

Community Organising Co-Manager

Our friend and long-time Environment Victoria volunteer, Elaine Smith, sadly passed away in June.

Elaine will remain in our memories as deeply kind, eternally dedicated to helping others, and always lighting up a room with her smile and sense of humour. Among the many contributions she made, Elaine helped run the local group South East Environment Network and played a key volunteer role in many environment and social justice campaigns. She was a pillar of support to her friends, family and the Frankston community and will be greatly missed by so many.

Elaine Smith (centre) with the South East Environment Network volunteers at Frankston Pier.

The fight for natural flows

Tyler Rotche
Healthy Rivers
Campaigner

From the blockade at Nyah-Vinifera to the River Peoples' Forum in Swan Hill, communities across the Murray-Darling Basin are challenging a shift towards engineering wetlands instead of restoring river flows.

In June, Friends of Nyah-Vinifera Park hosted the third River Peoples' Forum in Swan Hill, bringing together First Nations representatives, community members, researchers and water managers. This bi-annual event has become a vital space linking local struggles to Basin-wide water reform.

This year's focus was on river flows and connectivity. How do we make sure that water set aside for rivers actually reaches the wetlands and floodplain forests that need it?

When people talk about Murray-Darling water reform, they often focus on the Basin Plan. While it plays a central role in water management today, it's just one part of a bigger story.

Over the last 150 years, rivers have been reshaped to support irrigation, with increasing volumes of water diverted from rivers and floodplains. Governments first imposed limits on extraction in the 1990s, before the Basin Plan strengthened those protections in 2012. One of its most significant reforms was the creation of a large 'environmental water' pool, held by governments for the benefit of rivers, wetlands, fish, frogs, waterbirds and communities.

But environmental water doesn't automatically flow. Most of it exists as rights, stored in upstream dams until ordered and delivered – sometimes through irrigation infrastructure.

Setting aside water for rivers is one – often highly politicised – task. Equally important is ensuring it reaches the wetlands that depend on it.

Many Basin rivers are flow-stressed, and only 3% of wetlands receive enough water. Quantity is only part of the equation. Timing, connectivity and bottlenecks matter too. Does water flow downstream in ways that reflect natural seasonal rhythms and variability? Are rivers connected to their floodplains? Do wetlands receive the regular inundation they depend on?

These were some of the key questions explored at the River Peoples' Forum. They're also fundamental to the blockade at Nyah-Vinifera.

In late May, Wadi Wadi Elders and local community members set up Camp Destruction Disruption – a blockade aimed at stopping the Victorian government's plan to engineer the Nyah-Vinifera wetlands. The project would see hundreds of centuries-old River Red Gums cut down to make way for levee banks, pumps, concrete structures and steel infrastructure designed to hold water within the wetlands.

The government has framed the project as a last-ditch effort to protect wetlands in an increasingly dry river system. But that framing leaves out a crucial part of the story. Rather than restoring the flows that once sustained these wetlands, the project represents a shift towards redesigning them to function with less water.

Underpinning the project is a technocratic approach to river management: one that prioritises engineering solutions and the efficient operation of water systems. Within this paradigm, rivers become assets to be managed, while Murray cod, River Red Gums and other species are treated as outcomes to be

Photo: Doug Gimesy

Environment Victoria supporters and River Fellows join locals at the Nyah-Vinifera blockade near Swan Hill.

delivered rather than as part of living, interconnected ecosystems.

More troubling, the program emerged from a political assessment, not an ecological one. In effect, it functions as a water offset scheme – perhaps the first in the world. The logic is that if wetlands can be redesigned to need less water, then the savings can be returned to the market. This means the policy can be sold as a way to protect family farms. Politically, it's a gift to the irrigation lobby. In practice, water will likely be bought by investors – and sold back to desperate farmers each year at prices that erode their margins.

There are reasons to be skeptical. The first is the evident destruction: hundreds of old trees with irreplaceable hollows cleared and subtle floodplain topography modified.

Second, the government has never undertaken a rigorous assessment to determine whether similar outcomes could be achieved through improved river flows.

The third reason is political. The Victorian government presents floodplain engineering as a last resort, necessary because there's no other way to protect wetlands. Yet at Basin ministerial meetings Victoria continues to oppose measures that would return more water to rivers, even though those measures could reduce or eliminate the need for engineering projects in the first place.

Then there's consultation. In July, the Supreme Court found that Victoria had failed to adequately consult Traditional Owners before approving wetland engineering works at Nyah. The government must prepare a new Cultural Heritage Management Plan before proceeding.

The proposal for floodplain engineering lays bare many of the dynamics at play in water governance. The choice between engineering and natural flows, concrete and water, technocratic management and respecting First Nations authority. These questions are pressing – and the simultaneous reviews of the Basin Plan and Water Act provide a rare reform window to address them.

Among the keynote speakers at the River Peoples' Forum were ANU Professor Quentin Grafton and Emma Carmody, South Australia's Commissioner for the River Murray. Both stressed the importance of the current opportunity for reform. Too often, commitments have not been fully delivered and existing rules have not been properly enforced, limiting the benefits of water reform. The consequences are becoming increasingly clear. The lower Murray is now recognised as Critically Endangered under federal environment law. Scientists say its survival is essentially a coin toss.

In the audience was a packed room of community leaders, researchers and

activists. Among them were a new cohort of River Fellows and a busload of Environment Victoria supporters.

The movement for healthy, connected rivers continues to grow. And there is much to be done.

The opportunity to update the Basin Plan is a rare chance to reset the balance in favour of rivers. But this work isn't confined to policy processes and ministerial meetings. On the ground, damaging projects like the engineering of the Nyah-Vinifera floodplain still need to be stopped. Necessary programs have stalled, like allowing rivers to flow more naturally. And there are reforms – like returning water rights and decision-making power to Traditional Owners – that the Water Act has barely begun to address.

NEW SHORT FILM, 'WATER BELONGS TO COUNTRY'

First Peoples have cared for Murray-Darling rivers for thousands of years. But today, First Nations hold just 0.17% of water rights across the Basin. Speaking on his Country near Robinvale, our new short film features the story of Tati Tati and Wadi Wadi man, Brendan Kennedy, and the fight for water justice. Watch it at [ENVICT.ORG/WATER-JUSTICE](https://envict.org/water-justice)

Wildlife at Westernport Bay.
Lisa Schonberg

Another gas terminal. Another fightback.

Kat Lucas-Healey

Senior Climate and
Energy Advisor

It feels like we are stuck on repeat: yet another company is proposing to build a gas import and processing terminal in one of our precious bays.

Back in 2021, we fought off AGL's Crib Point gas terminal in Western Port. Viva Energy then proposed another terminal right on Geelong's doorstep in Corio Bay, a threat that's still on the table.

Now, multinational company Vopak wants to pollute the waters of Port Phillip Bay in the name of more climate-wrecking methane gas. Their proposed plan would see them bring in massive gas tankers and use bay water to warm up the liquefied gas, adding chlorine into the bay in the process.

At risk are threatened species such as the southern hooded shrimp, which is so rare it has seldom been observed alive, and school shark pups that migrate through the area.

Along with Geelong Sustainability and ACF Geelong, and with help from the

Environmental Defenders Office, we are supporting the community to have their say. Vopak's Environment Effects Statement (EES) process is in full swing, with the community, advocates and scientists making submissions and appearing at the hearings.

It has been so heartening to see those who fought AGL and Viva coming back to fight Vopak. The message is clear: we love our bays and we know that more polluting gas is not the answer.

HUGE THANKS TO EVERYONE WHO HAS SHOWN UP AND MADE THEIR VOICE HEARD!

The Future of Westernport Bay

The Westernport Bay community is coming together to call for a plan that protects this incredible marine sanctuary – for good.

Westernport Bay is home to an internationally important Ramsar-listed wetland that supports around 65% of Victoria's bird population and a diverse array of marine life. It's also the proposed site for Victoria's Renewable Energy Terminal (VRET) – a port facility that would be used for the construction of offshore wind farms.

Offshore wind is critical for our renewable energy transition. But choosing the Port of Hastings for the VRET has impacts on this precious ecosystem.

Threats to Westernport Bay aren't new. Communities have been fighting to protect this vital habitat for decades. After locals and conservation groups successfully fought off AGL's proposed gas terminal in 2021, a new idea emerged. Rather than responding to every industrial proposal, the bay needs a real plan that protects the most important places while balancing its multiple uses.

Local groups are now getting together alongside Environment Victoria and the Victorian National Parks Association to fight for the Westernport Framework: a whole-of-bay plan and funding to improve the health of the bay.

We held the first community forum on 23 June at Crib Point, with 22 attendees from 18 different groups in the Westernport area. Together, we're showing decision makers that communities across the region support a coordinated plan for the bay's future.

Victoria's feral deer crisis demands urgent action

Chris Schuringa

Nature Campaign
Manager

Feral deer populations are exploding, threatening wildlife, waterways and farms.

Together with the Invasive Species Council, we're pushing for a coordinated response.

Before colonisation, the plants, animals and waterways of what we now call Victoria evolved in relative isolation over tens of thousands of years. Landscapes were shaped and cared for by First Peoples, creating rich and balanced ecosystems.

European occupation changed that. Rabbits, foxes and deer were introduced for hunting and sport, while non-native plants arrived through farming and gardening. Without natural predators or diseases to keep them in check, many introduced species spread rapidly.

Today, invasive species are the leading driver of Australia's biodiversity and extinction crisis, threatening native wildlife, damaging waterways and costing farmers millions.

Among the most serious threats are feral deer. Introduced for hunting more than a century ago, deer have become one of Australia's fastest-growing invasive species problems. Victoria now has the country's largest feral deer population.

Deer are spreading across forests, farms and town fringes, damaging native vegetation, waterways and habitat for threatened species. They also reduce agricultural productivity, impact culturally

significant landscapes and increase the risk of vehicle collisions.

Despite the scale of the problem, feral deer remain protected under Victoria's Wildlife Act, making effective management more difficult. At the same time, investment in invasive species control falls well short of what's needed. Without coordinated action, deer numbers will continue to grow, placing even greater pressure on Victoria's environment and communities.

Victorians want stronger action on controlling feral deer. New polling shows just 13 per cent believe the state government is doing enough to manage invasive species, while reports of growing deer, rabbit and weed infestations continue.

That's why Environment Victoria has joined forces with the Invasive Species Council as part of a growing alliance of conservation groups, farmers and community leaders calling for urgent action.

Together, we're urging the Victorian Government to fund coordinated, professional deer control programs, remove barriers to effective management, and eradicate deer in western Victoria while it's still possible.

Momentum is building. Recent media coverage, including ABC's 7.30 and Four Corners, has highlighted the devastating impact feral deer are having across the state. Local forums in Gippsland are also bringing together landholders, conservationists, Landcare groups and experts to share solutions and strengthen coordinated action.

Victoria faces a clear choice: invest in effective management now or allow feral deer populations to continue growing and causing damage to Victoria's unique places, wildlife and communities. The longer we wait, the deeper the hoofprints sink.

NEW ALLIANCE EXPOSES ONGOING NATURE DESTRUCTION IN VICTORIA

Environment Victoria has joined Victorians for Nature, a growing alliance of environment groups working together to expose and challenge decisions that harm nature across the state.

The campaign tracks the growing list of threats to Victoria's forests, rivers and wildlife – from logging loopholes, weakened protections, underfunded national parks and growing invasive species problems. The message is simple: nature in Victoria deserves better.

By highlighting the issues and helping people take action, we're keeping track and pushing back against policies and decisions that put nature at risk. Learn more, sign up for alerts and get involved at [VICTORIANSFORNATURE.AU](https://victoriansfornature.au)

But be warned: this campaign contains strong language!

Feral deer trampling habitat in the Dandenong Ranges. Alex Maisey, Victoria National Parks Association

Environment Victoria supporters connect at the Movement of Many II launch event.

David Connolly on the power of community

Camille Warambourg

Key Relationships
Manager

From his local conservation reserve to the Environment Victoria community, David finds coming together brings happiness, purpose and strength.

David's special place in nature is home. For the past 20 years he's brought the bush into his garden, replacing lawn with Australian natives. Along the way, he's learned that change doesn't happen in isolation, but through people connecting, sharing knowledge and taking action together.

"When I joined Friends of Park Orchards' 100 Acres Reserve, I became friends with wonderful activists who guided me through my gardening projects. Local community groups bring people together. It's hard to make friends with your neighbours without a reason.

At Environment Victoria's Movement of Many launch event, I saw lots of young people from different backgrounds and groups connecting. How else can you motivate people than by bringing them together?"

Environment Victoria launched Movement of Many to help build an environment movement that better reflects the diversity of our state – celebrating leaders from a wide range of cultural backgrounds and creating space for new voices to lead.

It reflects something David has found throughout his life: people are stronger when they come together.

David's background as a chemical engineer shaped his understanding of climate change and his determination to act.

"I understand the nature of molecules and their thermal effects. Addressing climate change is the number one priority for me, and that's what draws me to support Environment Victoria. By engaging the community to push governments to act, Victoria has already made phenomenal steps to transition away from fossil fuels.

I want to help at the next election. I've looked up the Coalition's policies, which seem from another world. I'm getting some guidance from the EV team on how to approach my local Liberal MP."

When asked what gives him hope for the future and why he chose to remember Environment Victoria in his Will, David laughs:

"I turned 85 the other day, I can't believe it's true! Sometimes I'm glad I'm old, if you know what I mean. It will get harder for our children and grandchildren before it gets better.

There are a lot of lovely people in the world, but they often feel isolated or afraid. But when people come together, they're happier and stronger – and they can speak up for the things they care about."

Whether it's talking to your local MP, joining a conservation group or leaving a gift in your Will, each of us has a part to play.

Together, we can protect the places we love and leave future generations a world with clean air, clean water, and flourishing nature.

David, a lifelong nature lover and Environment Victoria supporter.

Including a gift in your Will is one way you can help Environment Victoria build a diverse and powerful environment movement for generations to come.

Our GREEN FUTURE FUND provides long-term financial stability by ethically investing donations and bequests to generate reliable income for our community organising work. Because the power of community is energising, inspiring – and when well organised, unstoppable.

To learn more about leaving a gift to the Green Future Fund, please visit [ENVICT.ORG/ONLINE-WILL](https://envict.org/online-will) or contact Sylwia, our Key Relationships Officer, who recently returned from parental leave on **(03) 9341 8105** or BEQUESTS@ENVIRONMENTVICTORIA.ORG.AU.
